Simply Safe

Our Solution

Asset Tracking is a location based service that helps you track the safety and location of assets such as cargo, documents etc while in transit, anytime, anywhere

In our system each and every consignment dispatched will be tagged with our tracking devices. This will enable the concern authorities to track their consignment when it is on the move. The system will give Tracking via SMS or GPRS, Real time GPS locating will be shown on the back-end.

We can also Set automatic tracking by distance or time interval, in this after travelling certain distance or time the device will send its location to the Back-end. The actual location name can be given via SMS or internet. We have also given SOS panic button in case of worse situations like accidents or loots with the help of which emergency alerts can be send.

The device is capable of providing LBS support and we can also locate their position even under subway. The device has a 4MB data logger for network blind area.

Our Solution

The devices will be powered by 1375 mAh inbuilt rechargeable battery, which will provide provide 2days back-up and 15 days standby. This will be charged by another external source to extend the back-up to 15 days and more.

Full Back-end servcie for the tracking system will be installed on the servers of the client for best monitoring.

Our Asset Tracking Services help you get real-time location information of your valuable business assets, on and off-site consignments. It is ideal for consigner, consignee and third party logistics service providers who want to benefit from real-time update of their cargo in transit.
