

Event Management System

By

Simply Safe

Most common existing system

The most common process being followed these days when any event is being organized is to get the invitees registered either manually or through the computers via internet, but these registrations still needs to be verified personally by the access control authority. The same process is being followed for seat allotment.

The situation of ciao occurs when at the venue the guests by any technical or manual errors are denied access by the control authority, which mostly occurs in the event management activity

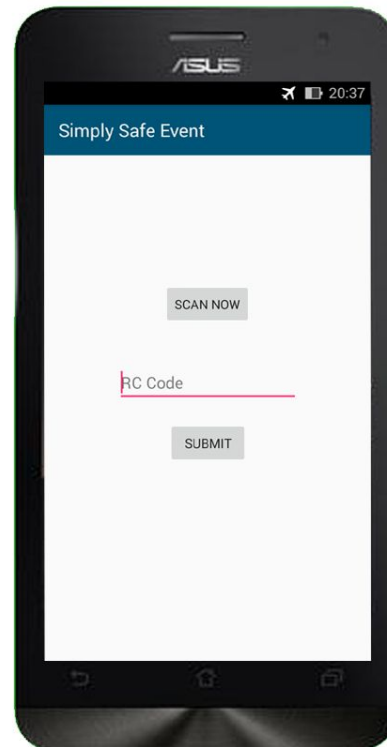

Currently all the data which is being retrieved from the fleet which includes Vehicle Maintenance, Pollution Control, Travel Records, Vehicle Access control, Fuel monitoring etc are being recorded manually and this data can be lost easily. There are no access restrictions to this data.
