# About Our System

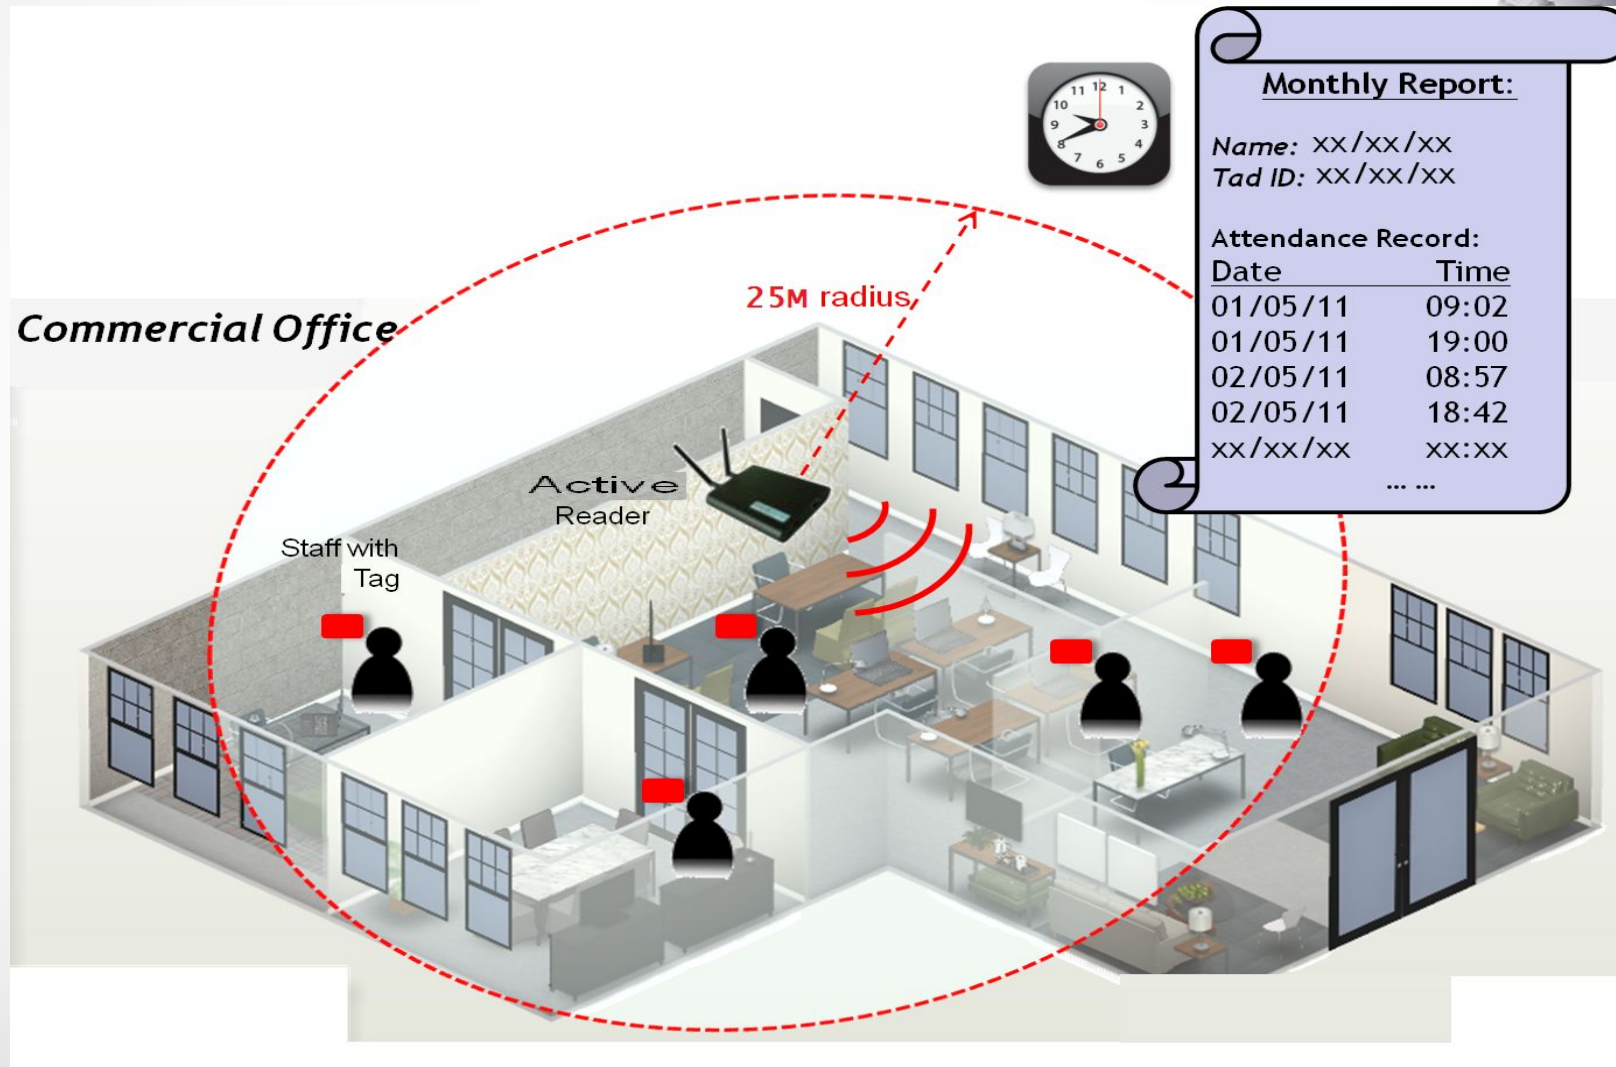

Smart Attendance system is a very feasible solution to all the problems faced by teachers and parents regarding the attendance of students. This system comprises of only two things the Attendance device and the Student smart cards which once deployed in school premises will enable the concern authorities to track the attendance of the students at school level, class level as well as of any individual student.

On daily bases an auto generated SMS will be send to all the students who are absent on that particular day after the specified time.

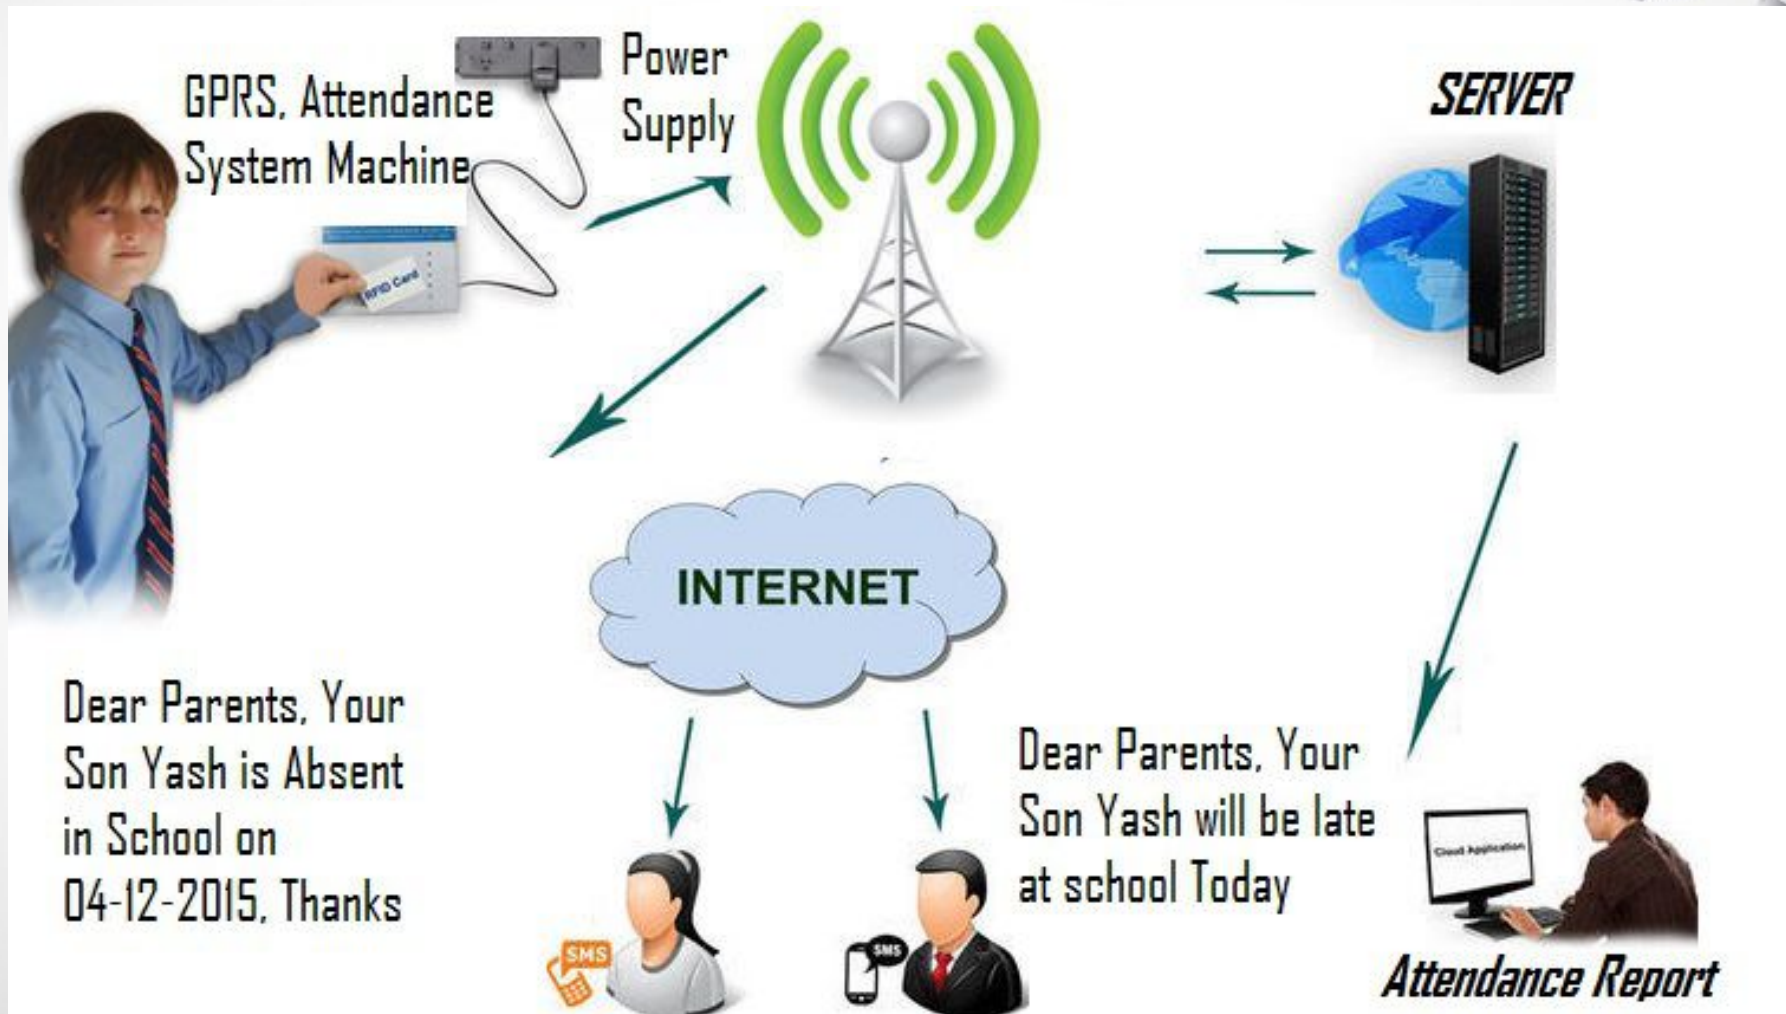

The student only needs to tap his/her smart card on the attendance device, as soon as this is done the attendance for that student will be marked and at the same time that data will be pushed to the cloud ,where his attendance can be seen.

The following image will help you understand more about the working f our system

# Smart Attendance System <Active>

# Smart Attendance System <Passive>

# Basic Features

- *Individual student attendance and reporting system to Increase parent knowledge about the importance of attendance.*
